PPTP Setup for Windows Vista

Students will need to create a new connection by following these steps

What you need to do on a Windows Vista machine is :

- * Go to network connections in Control Panel
- * Go to network and sharing centre
- * Create a new connection from the file menu
- * Connect to the network at my workplace
- * Virtual Private Network connection
- * Company name : "Chariot "
- * Do not dial the initial connection
- * Hostname : uow.nsw.chariot.net.au

Once icon is created, right click on the icon and click on properties -> security, change the radio button to advanced (custom settings). Click the settings button, ensure data encryption is set to " optional encryption (connect even if no encryption)" and that only "unencrypted password (PAP)" is ticked. Click OK to save the settings.

Then to launch a connection just double click the icon and enter your username/password.

PPTP Setup for Windows 2000 / XP

Students will need to create a new connection by following these steps

What you need to do on a Windows 2000/XP machine is :

- * Go to network connections in Control Panel
- * Create a new connection from the file menu
- * Connect to the network at my workplace
- * Virtual Private Network connection
- * Company name : "Chariot "
- * Do not dial the initial connection
- * Hostname : uow.nsw.chariot.net.au

Once icon is created, right click on the icon and click on properties -> security, change the radio button to advanced (custom settings). Click the settings button, ensure data encryption is set to " optional encryption (connect even if no encryption)" and that only "unencrypted password (PAP)" is ticked. Click OK to save the settings.

Then to launch a connection just double click the icon and enter your username/password.

PPTP Setup for Windows 98 / ME

Windows 98 will require Dialup Networking Upgrade 1.3, which is a free download from Microsoft. This is included as standard with Windows ME.

Firstly check that the appropriate protocols are installed. From Windows Control Panel/Network check that you have the following:

- * Network Adapter
- * TCP/IP
- * Microsoft VPN installed

To set up the PPTP in Windows 98/ME start by clicking on

- * My Computer >> Dial-Up Networking >> Make New Connection
- * Name for the computer "Chariot "
- * Select from the pull-down menu box "Microsoft VPN Adapter"
- * Hostname : uow.nsw.chariot.net.au

Once icon is created, right click on the icon and click on properties -> server types and only tick:

- * Log onto Network
- * Enable software compression
- * TCP/IP

Then to launch a connection just double click the icon and enter your username/password

PPTP Setup for Mac

Mac OS 10.x.

Mac OS 10.x and above has built into the OS support for VPN via PPTP. Below is how to configure a connection.

- * From the menu at the top select Go -> Applications.
- * From the application pop-up window double click on the "Internet Connect" icon.
- * From the menu at the top select File -> New VPN Connection Window.
- * If you have not setup VPN before you may be prompted with the following window, "Your computer needs to be set up for VPN (PPTP) connections."
- * Click on the continue button.
- * For "Server address:" enter uow.nsw.chariot.net.au
- * Enter your User name and Password.
- * Click on Connect to begin your VPN connection.

You must remove the data encryption for your VPN connection to be able to connect.

Open Internet Connect.

- * Click VPN (PPTP).
- * From the Configuration pop-up menu, choose Edit Configuration.
- * From the Encryption pop-up menu, choose None.

Mac OS 9 and below.

The older Macintosh operating system, OS 9 and below, does not have VPN & PPTP built into its standard operating system software. This type of functionality requires an additional third party software package to be installed.

The information below is provided as a service and does not constitute a recommendation.
