The Australian Power Institute

$8,000 bursaries for engineering students

a career with a power of difference

Australian Power Institute is working to enhance the education and professional development of power engineers across Australia.

Right now, members of API are seeking high quality electrical and mechanical engineering students with an interest in power engineering to drive the industry’s growth in Australia and meet the climate change challenges of the future.

Australian Power Institute is offering Power Engineering Bursaries to first year students with an interest in areas of engineering relevant to the power industry to provide not only financial support but also valuable paid vacation employment with member companies.

At least 35 Power Engineering Bursaries will be awarded across Australia in 2007!

For more information and the online application go to www.api.edu.au on the ‘Student Info - Australian Power Institute Bursary link"
