Department of Planning and Environment – Coal Innovation NSW (CINSW) Fund 2018

Organisations researching, developing or demonstrating innovative projects to lower the emissions from coal technologies in NSW are encouraged to seek funding from the latest round of grants offered as part of the Coal Innovation NSW (CINSW) Fund.

In 2018, a total of $8.5 million is available and both academics and industry are encouraged to apply to two separate funding streams:

1. **One-year Seed Grants of up to $100,000; &**
2. **Research Grants capped at $1.5 million over two years.**

(Applications can be made for both funding streams if they meet the eligibility requirements and selection criteria).

In each case, projects must be directly related to the reduction of greenhouse gas emissions in NSW from coal mining, coal fired power stations or industrial processes where coal is a major part of the manufacturing process.

To learn more about the program and the suitability of your project, click here for more information about both funding streams as well as to review supported projects under previous EOI Rounds.

Those intending to apply should email Research Grants & Development Officer, Lucas Hughes – lucash@uow.edu.au.

Applications close at 12pm on Monday 12 March 2018 – a fully-signed External Research Grants Submission Form is due to the Research Services Office **on or before this date.**
